

FREE WORKING GUIDE

# The 15-Minute *AI Audit.*

Walk through your own business the way I walk through my clients' – and find the hours AI can give back to you this month. No hype, no jargon, no tech background needed.

## Score five areas of your business.

Set a timer for 15 minutes. For each of the five areas, tick every statement that's true for you. Each tick = 1 point. At the end, add them up – your score tells you exactly where to start. Be honest; nobody's watching.

### [01] Repetitive Admin

- ☐ Someone re-types information from one place into another (emails into spreadsheets, forms into systems) every week.
- ☐ You write the same kind of email, quote, or reply over and over with small changes.
- ☐ Scheduling, reminders, or follow-ups regularly slip through the cracks.
- ☐ There's a weekly task you always postpone because it's boring, not because it's hard.

Score 3+? This is usually the fastest win – repetitive admin is what AI automates best.

### [02] Content & Communication

- ☐ Your website, social media, or newsletter goes quiet for weeks because writing takes too long.
- ☐ You know what you want to say to customers but struggle to get it written down.
- ☐ Translating or adapting content for different audiences (or languages) eats real time.
- ☐ Proposals or client documents get rebuilt from scratch each time instead of from a template.

Score 3+? An AI content workflow can turn one hour of your voice notes into a month of material.

### [03] Customer Questions

- ☐ You answer the same 5–10 questions again and again by email, phone, or DM.
- ☐ Enquiries arrive at all hours and wait until someone has time to reply.
- ☐ New customers ask things your website should already answer.
- ☐ You've lost a lead because the reply came too late.

Score 3+? FAQ content, a smarter website, or an AI assistant can catch these before they reach your inbox.

### [04] Numbers & Paperwork

- ☐ Invoices, receipts, or records pile up before anyone processes them.
- ☐ Reports for the bank, the board, or the tax office take days of collecting numbers.
- ☐ You make decisions on gut feel because pulling the actual data is too much work.
- ☐ Important information lives in someone's head or inbox instead of a system.

Score 3+? Document-reading AI and simple dashboards are less work to set up than you think.

### [05] Your Online Presence

- ☐ Your website is outdated, or you don't have one yet.
- ☐ You're invisible when people search for what you do in your area.
- ☐ Updating the site requires calling someone and waiting.
- ☐ A visitor can't take the one action you want (book, buy, enquire) in under a minute.

Score 3+? An AI-built website costs a fraction of the old way and can be live in weeks, not months.

## — YOUR RESULT

# Add up your ticks.

Total score: \_\_\_\_\_ / 20 • Highest-scoring area: \_\_\_\_\_

|         |                                                                                                                                                                                                      |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0 - 5   | <b>Tight ship.</b> Your operations are lean. Your opportunity is offense, not defense: use AI to grow — content, visibility, new offers — rather than to fix leaks.                                  |
| 6 - 12  | <b>Real hours on the table.</b> This is where most small businesses land. Pick your single highest-scoring area and fix only that first. One working AI system beats five half-built ones.           |
| 13 - 20 | <b>You're the bottleneck — and that's good news.</b> It means the hours are recoverable. Businesses in this range typically win back 5–10 hours a week within the first month of systematic changes. |

## — THE ONE RULE

Don't start with the tool. Start with the **highest-scoring area**, describe what "fixed" looks like in one sentence, and only then pick the simplest AI that gets you there. That's the entire method behind every system I build.

### What to do with your score

Three ways to move, depending on how hands-on you want to be:

- **Do it yourself, with company** — join **The AI Fundi Lab**: step-by-step builds, weekly live sessions, and people fixing the same areas you just scored.
- **Talk it through** — book a **free 15-minute call** and tell me your highest-scoring area. No pitch; I'll tell you honestly what I'd do first.
- **Have it done for you** — my **AI Audit service** is this checklist's big sibling: I walk through your business with you and hand you a prioritized action plan.
